

Complex
machining
Advanced
liquid painting

Hittech MPP BV is a certified mechanical precision company, specialising in complex processes like turning, milling and the application of advanced multiple functionality, multi-layer paintwork.

The company's unique position in the hi-tech branch is the result of years of experience, modern machinery and supporting competences, such as 3D measuring and CAD-CAM.

Our specialists, with their leading knowledge and expertise in advanced liquid painting, are at your service, and will not only handle your products, but also act as an advisor to ensure the right materials and processing methods are selected.

Top quality, speed, flexibility and reliability are our founding principles.

Hittech MPP makes it.

Complex machining and extreme precision

Hittech MPP is a mechanical precision company belonging to a group of specialist suppliers. With over 70 years' experience, Hittech MPP is a leading supplier in the fabrication of mechanical components.

Complex products from softer materials

Hittech MPP's machining activities mainly involve the turning and milling of relatively soft materials, such as aluminium alloys, brass and plastics. The company's competences come into their own through a combination of complexity and high precision, constantly searching for the limits of what is producible. All this is possible through a combination of highly-skilled personnel and modern machinery.

Hittech MPP has carved out a unique position in the field of 5-axis milling. Years of experience by our specialists, their ongoing training and the modern machinery all ensure that Hittech MPP remains at the forefront of this technology.

High degree of automation

The processes at Hittech MPP are automated to a large degree. This not only includes the completely automated production cells that operate 24 hours a day, but also covers the management of your order's entire logistics process. A modern ERP system guarantees speed, reliability and the traceability of your orders and products.

The interface between data management, CAD/CAM and an automated 3D measuring system ensures a rapid and error-free exchange of data between the various phases of production. And also offers the option of 24 hour-a-day unmanned production.

Advanced multi-layer paint systems with multiple technical functionality.

Hittech MPP's experience in the field of multi-layer paint systems has been applied for years in market segments for which quality is a given and not just a requirement. Processed products are applied in aerospace, the medical sector and defence.

Hittech MPP is the paint specialist in the field of EMC protection, infrared absorption, antireflection, x-ray permeability, chemical resistance and anticorrosion, with aesthetic properties playing an essential role.

The quality of the paint (layer) is determined with great precision using various testing processes, including defining bonding, layer thickness, shine and reflection.

Our clients:

Hittech MPP's clients include those operating in the fields of: medical equipment and instruments, scientific analysis equipment, aerospace, measurement systems, micro-electronics, optical equipment, special vehicles and defence.

MPP is ISO 9001:2000 and AQAP 2120 certified
